

JMJ Medical Inc.

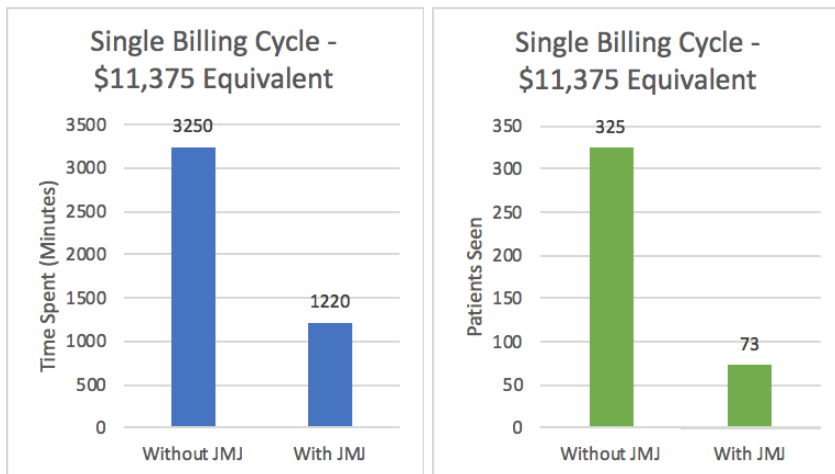

What Do We Do?

We provide an all-inclusive EMR & patient management service. Our proprietary software allows for efficient and accurate identification of both high-incentive billing opportunities, and clinical care-gaps. We also provide an effortless EMR data panel clean up service to ensure the quality of your data exceeds provincial expectations. This is supported with provincial funding as incentives to offset the cost.

We will find your missed billings and patient that need to be seen with our software and recall those patients on your behalf. We pride ourselves in providing an optimization service that minimizes administrative burden on the physicians and their staff.

We also follow the guidelines provided by the Doctors of BC to maintain patient confidentiality and privacy integrity. Patient data are only accessed and analyzed on a need-to-know basis.

Our Results:

This is the data we gathered from one of our Vancouver-based GP clients. Through a single billing cycle, we were able to generate 3 times the normal revenue for the physician alone. The physician also saw less patients and had the freedom to allocate his time to other needs. We received positive feedback, especially regarding our recall service, which allowed the execution of care and billing opportunities without additional workload for office assistants.
