

JMJ Medical Inc

Tomorrow's tech in today's care

What's the value?

For clinic owners and doctors, who don't have an efficient way to recall patients for high incentive billing opportunities and care gaps, JMJ Medical provides an automated product to increase revenue and allow clinics to offer preventative care without added administrative workload.

How does it work?

- Our product is compatible with all EMR platforms
- Provide us with your EMR login
- Provide us with your official email access
- Let us know which patient demographic to recall (ie complex care patients, 14050 CDM patients, patients with care gaps as per guidelines, etc)
- Review standardized email templates

Backend

- Our product will automatically generate the list of requested patients to recall from the EMR
- An email template reviewed by the physician will be sent to all indicated patients through the clinic's official email
- They will be asked to call the clinic to book an appointment for the purpose indicated within the email
- The content of the email will be password protected to ensure privacy and security

Results collected from a client GP in Vancouver

- 1,220 minutes in total were spent seeing the patients identified and recalled by our service. This equates to 1,220 minutes for \$11,375.00 in revenue
- Without our prioritization service, doctors primarily see walk-in patients for a common in office visit of \$35.00 per patient on average
- Each walk-in visit on average lasts 10 minutes (may vary depending on physician), 3250 minutes is needed to generate \$11,375.00, vs 1,220 minutes resulting from our service

Results collected from a client GP in Vancouver

- 73 patients were seen as a result of our service (in those 1,220 minutes)
- With 10 minutes per walk-in visit, and \$35 per visit on average, 325 patients would have needed to be seen to match the impact of our prioritization service
