JMJ Medical Inc.

Value Proposition

Automated, cross-platform EMR service that proactively identifies and completes billing opportunities / clinical care gaps to boost revenue and ensure high quality patient care, while minimizing administrative burden on physicians.

What have we done?

We have partnered with local GP's and specialists, implementing our EMR management service. Proprietary software allows for efficient and accurate identification of both high-incentive billing opportunities, and clinical care-gaps.

Further from solely identifying, we have boosted clinic revenue by recalling patients on the physicians' behalf, and submitting their claims. This ensures maximum benefit while minimizing workload and the disruption of workflow for our clients. A commision based billing model has insulated our clients from unwarranted costs.

Oriented towards automated software, and a fully integrated approach that minimizes administrative burden, we offer a service with a negligible investment of time to adopt, helping alleviate pressure on the #1 resource from doctors: time. By leveraging optimization software on EMR data, we maximize both billing revenue, and the quality of care for patients. Following local billing guides strictly also minimizes the likelihood of an audit.

Where do we want to go?

Product development:

Client satisfaction is our mission. We work continuously with our clients to ensure that our process, workflow and technology stay up to date, to exceed expectations. Improvements we make to one client are immediately applied across all clients.

Expansion & Scale:

Improving our service and pursuing mutually beneficial partnerships go hand in hand with discovering the best opportunities to scale. We welcome partnerships that can help with scaling our clientbase up, or that offer new technology and features, helping improve our current service.

Executive Team

- Jorden Lo CEO

- Michael Qiu CMO

- Jacob Klein CTO

Services:

EMR Data Management

- EMR Billing Optimization, and Care-gap Completion

Panel Clean up

- Automated, accurate, and efficient EMR data clean up to improve the quality of the data

EMR Set Up

- Specialized Dashboard Development for addressing care-gaps in multiple chronic conditions

Research Commissions

- EMR data management consultation and publication support

Partners:

- Camrose Primary Care Network

- Boehringer-Ingelheim
